## FSK/ASK TRANSMITTER MODULE

The MTX-705/15/35 FSK/ASK transmitter is designed for applications in the 315 MHz, 433 MHz, or 868 MHz industrial-scientific-medical (ISM) band, according to the EN 300 220 telecommunications standard; but it can also be used in any other country with similar frequency bands.

The MTX-705/15/35 transmitter consists of a fully integrated voltage-controlled oscillator, a divide-by-32 divider, a phase-frequency detector and a charge pump. An internal loop filter determines the dynamic behavior of the PLL and suppresses reference spurious signals. A Colpitts crystal oscillator is used as the reference oscillator of a phase-locked loop synthesizer. The VCO's output signal feeds the power amplifier.

### Key Features

- Fully integrated PLL-stabilized VCO
- Frequency range from 250-350MHz, 380-450MHz, or 850-930MHz
- Single-ended RF output
- FSK through crystal pulling allows modulation from DC to 40 kbit/s
- High FSK deviation possible for wideband data transmission
- ASK achieved by on/off keying of internal power amplifier up to 40 kbit/s
- Very low standby current
- On-chip low voltage detector
- High over-all frequency accuracy
- FSK deviation and center frequency independently adjustable
- Adjustable output power range: -11 to +10 dBm
- Adjustable current consumption: 3.4 to 10.6 mA

### Typical Applications

- General digital data transmission
- Tire Pressure Monitoring System (TPMS)
- Remote Keyless Entry (RKE)
- Low-power telemetry
- Alarm and security systems
- Garage door openers
- Home automation
